

ABSTRACT

5 Antisense compounds, compositions and methods are
provided for modulating the expression of Phospholipase A2,
group IIA (synovial). The compositions comprise antisense
compounds, particularly antisense oligonucleotides, targeted
to nucleic acids encoding Phospholipase A2, group IIA
10 (synovial). Methods of using these compounds for modulation
of Phospholipase A2, group IIA (synovial) expression and for
treatment of diseases associated with expression of
Phospholipase A2, group IIA (synovial) are provided.
